Senior Android Engineer

PROFESSIONAL SUMMARY

Senior Android Engineer with 9 years of experience specializing in Kotlin/Compose payment and ID verification pipelines, and accessible UI designs shipped to millions of users across Canada. Increased checkout velocity by 35% and reclaimed 2-3 engineering hours per week by building custom AI agents that auto-generate Jira/GitLab PR summaries from code diffs.

TECHNICAL SKILLS

- Languages: Kotlin, Java, Python
- Mobile & Architecture: Jetpack Compose, Coroutines, Flow, Kotlin Multiplatform, Compose Multiplatform, SQLDelight, Room, SQLite, Koin, Hilt, Clean Architecture, MVVM, MVI
- Backend & Integration: Ktor, Spring Boot, FastAPI, REST APIs, WebSockets, MQTT, Webhooks
- AI Engineering: OpenAI Agents SDK, LangChain, LangGraph, Pydantic AI, Pydantic Graph, MCP, Llama.cpp, Ollama
- Telemetry & Analytics: Adobe Analytics (Omniture), Dynatrace, Firebase Crashlytics
- DevOps & Infrastructure: Docker, Linux, PostgreSQL, Gradle, GitHub Actions, Firebase App Distribution, Supabase, Appwrite, Jenkins, SonarQube, Git, LaunchDarkly
- Testing: JUnit, Espresso, Compose UI Testing

PROFESSIONAL EXPERIENCE

Senior Android Developer | Quantrics Enterprises Inc. | Taytay, Rizal, Philippines (Remote)
July 2023 - August 2026

- Extended the core payment flow with secure Interac-backed Autopay, deploying new billing features to 9 million+ active users across Canada and eliminating manual retry friction for recurring subscribers.
- Increased checkout velocity by 35% and eliminated manual data entry errors by integrating a third-party automated ID verification service, deprecating legacy manual form flows for credit/debit transactions.
- Reclaimed 2-3 engineering hours per week by building custom AI agents that auto-generate Jira/GitLab PR summaries, and an MCP pipeline (Figma-to-Android Studio) that auto-generates Jetpack Compose UI components.
- Raised codebase health from a Bronze tier (50-60%) to Silver tier (70-75%) SonarQube quality gate, enforcing strict PR standards and reducing technical debt across 10+ modules.
- Partnered with Release Train Engineers to execute bi-weekly Play Store releases, driving the implementation of strict post-mortem RCAs that reduced repeat regressions by 50%.

Android Developer | Baxta | Australia (Remote)
June 2022 - May 2023

- Re-architected the application splash screen and startup sequence, eliminating UI thread blocking during initial dependency loading to deliver a zero flicker cold start.
- Shipped a TikTok-style vertical reels feed with Following and For You streams and engagement actions, managing video-player lifecycles and memory limits to prevent playback crashes during continuous scrolling.
- Implemented a pet-friendly map directory on the Google Maps SDK with search, filters, and a marker synced bottom sheet, integrating implicit intents for seamless routing to native navigation and dialer apps.

- Automated MS App Center CI/CD pipelines for distinct QA and Play Store builds by configuring Android build types and product flavors, eliminating manual generation wait times after sprint feature completions.

Android Developer | Tawk.to | United States (Remote)
April 2020 - May 2022

- Re-architected the real-time communication layer from MQTT to WebSockets, eliminating broker bottlenecks and stabilizing message delivery under high concurrency.
- Consolidated fragmented admin navigation into a single path structure, removing redundant screens and reducing the number of taps required to complete common administrative tasks.
- Eliminated recurring runtime regressions in the live chat client by introducing scenario-based test coverage across critical message delivery flows.

Android Developer | CAPSL | Hong Kong (Remote)
December 2019 - February 2020

- Replaced manual matchmaking bottlenecks with a Round Robin engine and an in-app notification hub, managing real-time sequence tracking and leaderboard state across 5+ game titles.

Android Developer | Bywave | Davao City, Philippines
June 2017 - December 2019

- Implemented ProGuard/R8 obfuscation for release builds and authored JUnit edge-case suites, preventing runtime crashes and protecting proprietary code in production.

EDUCATION

Bachelor of Science in Computer Science
University of Southern Mindanao, 2015
